### **News from the CEEES**

The CEEES is the Confederation of European Environmental Engineering Societies; She focuses on the sciences and techniques optimising the design of products that have to resist again the agressions of the Environment (shocks, climatic conditions, Electro-magnetic interferences, etc) and that alos have to respect the environment (recycling possibilities, noise, etc..)

The BSMEE is member of the CEEES.

The CEEES held her 45<sup>th</sup> general assembly on Februari 17<sup>th</sup> in Brussels, under the presidency of Dr Peter Eriksson. Three particular working groups reported on their results: the WG RELIABILITY and ESS chaired by Henri Grzeskowiak (France ASTE), the WG Mechanical Environments (Vibrations, a.o.) chaired by Dave Richards (SEE, UK) and the WG CLIMATIC and AIR Pollution chaired by Thomas Reichert. All those reports may be consulted on

### **Nouvelles Normes – Nieuwe Normen Mechanical Engineering**

NBN EN 14610:2004: Lassen en verwante processen . definitie van lasprocessen voor metalen.  
Oudage et techniques connexes. Définition des procédés de soudage des métaux

### **Environmental Engineering**

EN 352-4 Hearing Protection. Safety requirements and testing.

ISO 3095 Railwat Applications. Acoustics. Measurement of noise emitted by railbound vehicles.

EN 2243-5 : Climatic. Aerospace series. Ageing Tests

ISO 13373-2 Shock and Vibration: condition monitoring and diagnostics of machines.

BS ISO 14837-1 Mechanical vibration. Ground borne noise and vibration arising from rail systems.

General guidance

BS ISO 16063-22 Methods for the calibration of vibration and shock transducers.

ISO 18431-1 Mechanical vibration and shock. Signal processing. General instructions.

EN 12507 Transportation services. Guidance notes on the application of EN ISO 9001 to road transportation.

EN61000-6-2 Electro-magnetic. Generic Standards. Immunity for Industrial environment.
